

MRJD interpretation sensitivity (diagnostic only; lambda=0.70)

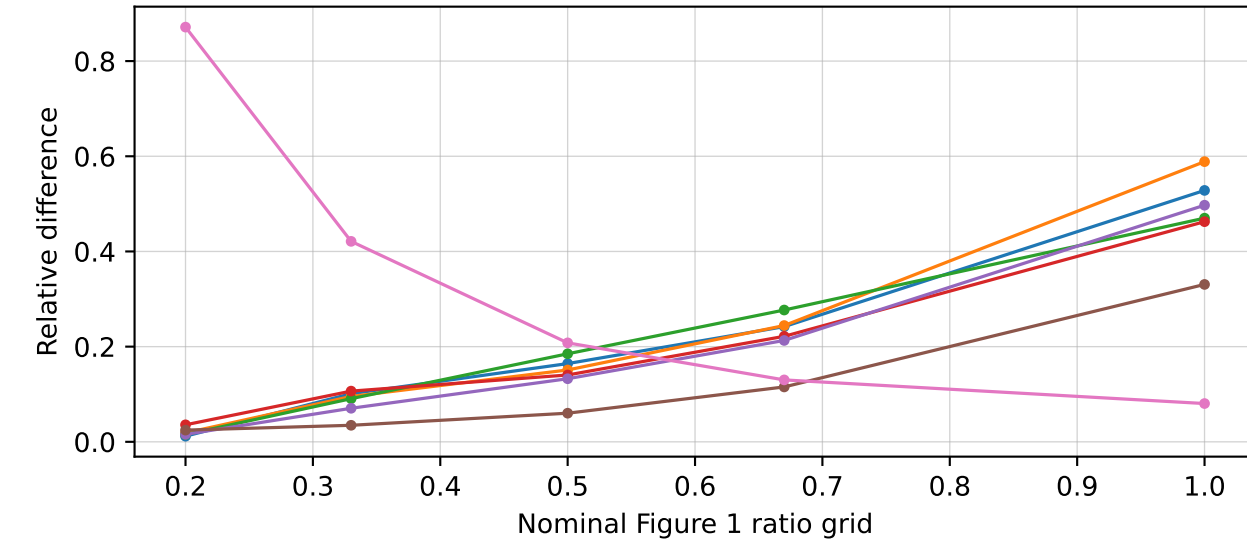

Vanilla put, 1 observation: relative median price difference

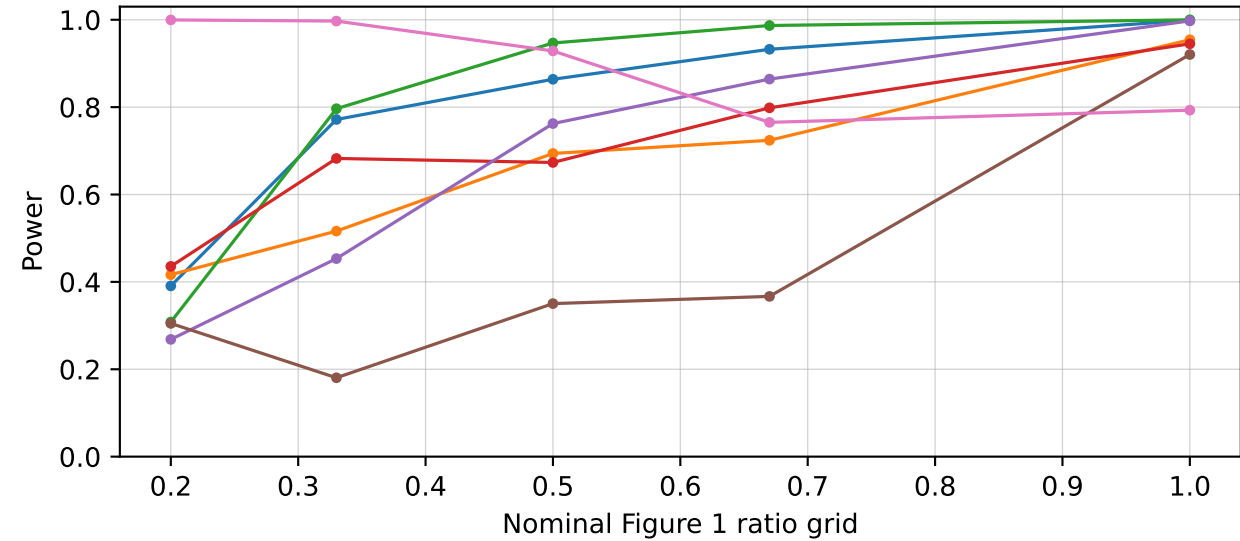

Vanilla put, 1 observation: GradTwo median estimated power

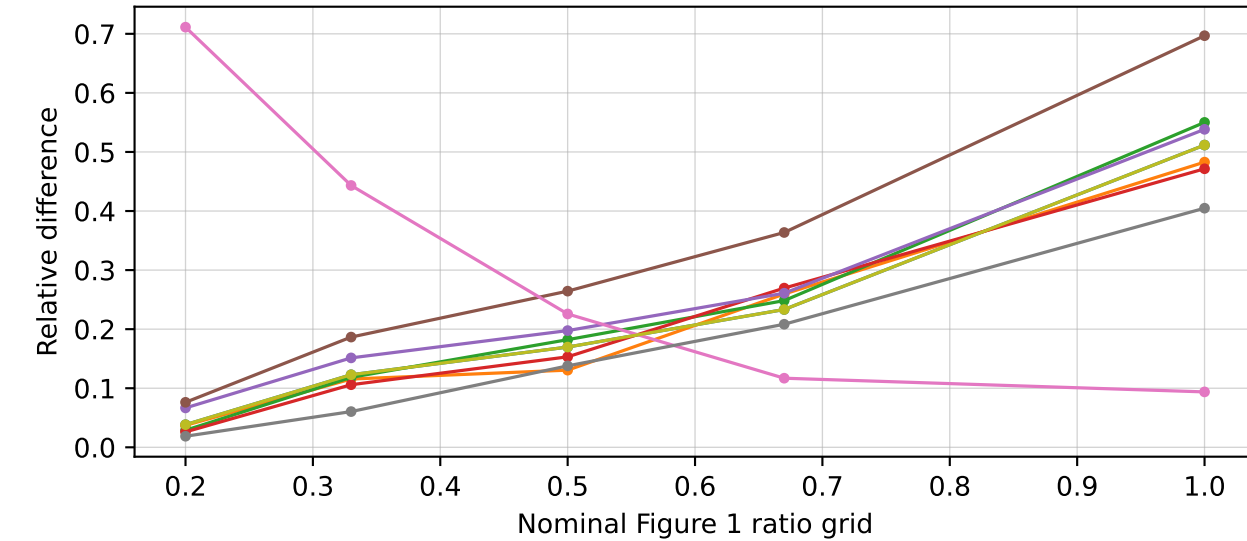

Asian call, 4 observations: relative median price difference

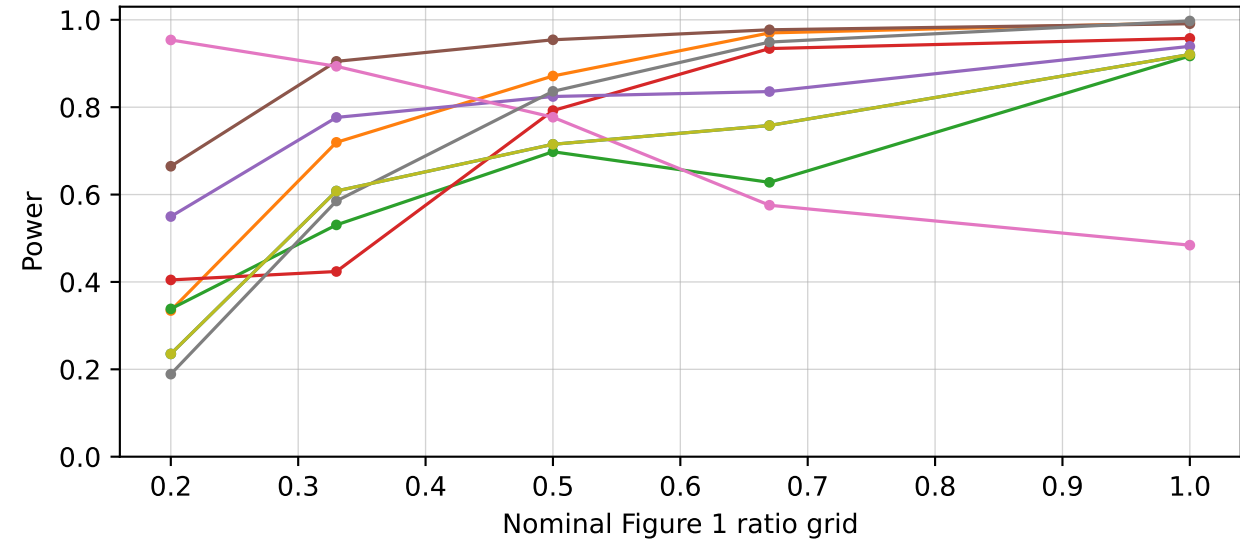

Asian call, 4 observations: GradTwo median estimated power

Asian put, 12 observations: relative median price difference

Asian put, 12 observations: GradTwo median estimated power

- Mean $|J|$ / sigma; paper's plotted axis
- Treat Table 2 beta values as exponential rates
- Positive-jump probability 0.25 sensitivity
- Positive-jump probability 0.75 sensitivity
- Illustrative $\lambda^M=0.1$ sensitivity
- Omit jump compensator ablation
- Scale beta gap to lambda / $|\beta_+ - \beta_-|$
- 12-date Asian call caption interpretation
- 12-date Asian put Example-4 interpretation
